This map was compiled from U. S. Geological Survey quadrangle maps, General Land Office plans, aerial photographic from March, 1960, road inventory surveys in June, 1960, and other map data.

This map was prepared on the transverse Mercator projection, East Zone, Florida system of plane coordinates.

The railroad station symbol as shown on this map does not necessarily denote the presence of a station. It may be only a point designated for the receipt or delivery of freight, such as a platform or siding.

Portions of railroads and other secondary symbols are omitted in order to show topography.

In completed rural areas local roads are indicated by a single line only. For details refer to insets prepared for this county.

No attempt has been made to show all drainage canals and ditches.

City populations are taken from the U.S. Census for 1960.

Due to insufficient space land grants will not be identified by name on this county.
